

# Recovery unit for extinguishing powders

## SV910 model

### DESCRIPTION

Unit SV910 allows to empty both the pressurized and the unpressurized fire extinguishers, collecting the recovered powder into bags up to 25 kg of capacity. This model is composed by a dual inlet charge separator, an highly performant suction motor and a basement suitable for both transport and working positions.

### APPLICATIONS

The extinguishing powder is easily recovered from the pressurized extinguisher by connecting it to the suction line and operating the extinguisher. In order to empty the unpressurized fire extinguishers, the valve must be removed so as to allow the supplied suction pipe to be introduced inside.

### COMPONENTS AND DEVICES

- > Electrical suction motor with lateral intake
- > Micro - porous Gore-Tex® filter
- > Filter cleaning device with back blower
- > Painted steel framework
- > Powder suction line for pressurized extinguishers
- > Powder suction line for non-pressurized extinguishers

### STANDARD EQUIPMENT
